

eSIM Query API

Technical API Document

This document provides the technical request and response specification for the eSIM Query API. It describes the request parameters and the fields returned in a successful API response.

1. API Purpose

The eSIM Query API is used to retrieve eSIM/SIM information using the API key and ICCID. The response provides card status, activation and expiry information, primary and fallback TSP details, MSISDN information, and data usage.

2. Request

Request Parameters

Parameter	Data Type	Required	Description
k1	String	Yes	API key used for the request.
k2	String	Yes	ICCID of the SIM/eSIM to be queried.

3. Sample Request

```
{
  "k1": "<API_KEY>",
  "k2": "89911025034089231833"
}
```

4. Successful Response

```
{
  "apiResponseCode": "LCM_001",
  "apiResponseMsg": "Your request has been processed successfully",
  "sim_Entity_Count": "1",
  "resultObj": [
    {
      "iccid": "89911025034089231833",
      "cardState": "COMMERCIAL",
      "cardStatus": "Active",
      "activateOn": "12-08-2026",
      "expiredOn": "22-08-2027",
      "primaryTSP": "Airtel",
      "primaryMSISDN": "5754205918037",
      "primaryStatus": "Active",
      "fallbackTSP": "BSNL_S",
      "fallbackMSISDN": "915752181802747",
      "fallbackStatus": "",
      "dataUsage": "0.00",
      "dataUsageDate": "12-08-2026"
    }
  ]
}
```

```
]
}
```

5. Response Field Specification

Field	Data Type	Example	Description
apiResponseCode	String	LCM_001	API response code. The supplied example indicates successful processing.
apiResponseMsg	String	Your request has been processed successfully	Human-readable API response message.
sim_Entity_Count	String	1	Number of SIM/eSIM records returned.
resultObj	Array	[{...}]	Array containing the SIM/eSIM query result.
iccid	String	89911025034089231833	Unique identifier of the SIM/eSIM.
cardState	String	COMMERCIAL	Current lifecycle/state classification of the card.
cardStatus	String	Active	Current status of the card.
activateOn	String	12-08-2026	Date on which the card was activated.
expiredOn	String	22-08-2027	Expiry date of the card.
primaryTSP	String	Airtel	Primary Telecom Service Provider.
primaryMSISDN	String	5754205918037	MSISDN associated with the primary TSP.
primaryStatus	String	Active	Status of the primary subscription/MSISDN.
fallbackTSP	String	BSNL_S	Fallback Telecom Service Provider.
fallbackMSISDN	String	915752181802747	MSISDN associated with the fallback TSP.
fallbackStatus	String		Status of the fallback subscription/MSISDN. Empty in the supplied response.
dataUsage	String/Decimal	0.00	Data usage reported for the SIM/eSIM.
dataUsageDate	String	12-08-2026	Date associated with the reported data usage.

6. Response Interpretation – Sample

- apiResponseCode = LCM_001 indicates that the request was processed successfully in the supplied example.
- sim_Entity_Count = 1 indicates that one SIM/eSIM record was returned.
- The returned card has cardState = COMMERCIAL and cardStatus = Active.
- The primary TSP is Airtel and primaryStatus is Active.
- A fallback TSP and fallback MSISDN are returned; fallbackStatus is empty in the sample response.
- The reported data usage is 0.00 for the date 12-08-2026.

7. Data Format Notes

- Dates in the supplied response use DD-MM-YYYY format.

- The resultObj field is an array and may contain one or more records depending on the query result.
- Empty string values, such as fallbackStatus in the sample response, should be handled as an empty/unavailable value.
- API keys such as k1 should be treated as confidential and should not be exposed in public documentation or client-side logs.
